## About water... Maximum transparency

### WATER SOFTENER

The ecological automatic water softener is an appliance that replaces calcium and magnesium ions (salts present in the water fouling) with ions of sodium, soluble salts that leave no deposits. The softener ECOS encloses a highly technological system which make you save the consumption of water and of salt up to 50%.

### REVERSE OSMOSIS

Reverse Osmosis is a natural phenomenon by which two liquids with different concentration of dissolved substances tend to conform if they are separated by a semipermeable membrane. With Reverse Osmosis, have several advantages, the main advantage is being able to obtain extremely clean, high quality water.

It eliminates the trouble of transporting and stocking heavy, space consuming water bottles, not to mention that RO water comes around 90% cheaper than bottled water.

### Seawater Desalination System for sanitary use marine / industrial

Through the desalination system, the sea water is forced at high pressure through a series of membranes which let pass only the pure fresh water.

### Sterilizers

The UV lamp is a system to remove the bacteria present in the water

### Professional system of gassing and cooling
